312 Spring Commons

INVESTOR EXECUTIVE BRIEF

Proposed Reference Transaction 001 — public title, protected rehabilitation capital and measurable transaction efficiency

v0.6 · September 19, 2026

v0.6: productive infrastructure · M5 onboarding · SEC alignment · capital provenance · source-chain intelligence

WORKING DRAFT / PROJECT ASSUMPTIONS

This document is a working project draft for discussion, diligence and counsel review. It distinguishes verified facts from working assumptions, target benchmarks and items to be determined. Nothing herein is an offer to sell securities, a guarantee of tax benefits, a commitment by any government agency, or a representation that the proposed public-benefit conveyance, financing, lease, technology benchmark or community-distribution structure has been approved.

Existing Civic Asset

Executive Summary

PPT-EZ-CA-0001 is a proposed reference transaction centered on the historic Federal Building & U.S. Courthouse at 312 N. Spring Street in Los Angeles. The project is testing whether an existing federal Historic Surplus pathway can preserve public ownership while mobilizing philanthropic, public, tax-credit and mission-aligned private capital to rehabilitate and activate a major civic asset. The same transaction is also intended to benchmark a TitleChain/M5 protocol for title-state transparency, authority controls, transaction coordination and measurable reduction of administrative and capital friction.

CURRENT STATUS: Conditional go / diligence. The federal Historic Surplus pathway remains to be confirmed as available; public grantee, operator, final scope and financing are not yet approved.

CURRENT OWNER: United States of America / federal property administered through GSA, subject to authoritative title confirmation.

PROPOSED TITLE OUTCOME: Qualifying City/County/state instrumentality or other eligible public entity — TBD — holding fee title subject to federal historic/public-use restrictions.

PROPOSED PROJECT DESIGNATION: People's Public Trust Economic Zone 0001 — California (PPT-EZ-CA-0001), a project benchmark designation; not an official state economic-zone designation unless separately authorized.

1. The Asset

Item	Working project fact / assumption
Address	312 N. Spring Street, Los Angeles, CA 90012
Property	Federal Building & U.S. Courthouse
Historic status	National Historic Landmark / National Register listed (per project feasibility sources)
Rentable area	751,791 SF shown in current project/GSA research; reconcile against other government records before underwriting
Parcel	APN 5161-005-902 — subject to title/survey confirmation
Capital-maintenance reference	GSA reported nearly \$153M in avoided capital-maintenance liabilities; not a verified rehabilitation budget
Current pathway thesis	Historic Monument Public Benefit Conveyance through qualifying public grantee, followed by approved long-term operation

2. One Asset, Two Economic Architectures

Architecture	Illustrative flow
Conventional private development	Sale/acquisition vehicle → private equity/debt → rehabilitation → lease/revenue → investor/lender economics. Illustrative comparator, not the established disposition path for this property.
Proposed public-commons path	United States/GSA → Historic Surplus → qualifying public grantee → protected public fee title → long-term approved operator → rehabilitation + public/compatible revenue uses.

Core thesis: the public keeps the land; capital finances rehabilitation and defined operating economics; workers and community participate in the economy around the asset rather than receiving speculative fractional deed interests.

3. Current Legal / Transaction Structure

- United States / GSA: current federal owner/disposition authority.
- National Park Service: Historic Surplus program oversight and preservation/use review.

United States People's House

Proposed public-commons activation / Concept imagery for discussion

CIVIC FRONTAGE AND PUBLIC REALM

MIXED-USE COMMONS AND ROOFTOP LANDSCAPE

SPRING STREET ELEVATION

- Public Grantee — TBD: proposed fee titleholder, accountable for federal deed restrictions.
- People's Public Trust / PPT-EZ-CA-0001: proposed commons framework and benchmark program, not current fee owner.
- 312 Spring Commons Operator — TBD: proposed long-term rehabilitation/operating entity under an approved public-owner/NPS structure.

4. Preliminary Capitalization

The project uses an approximately \$200M-\$240M preliminary all-in capitalization envelope, with a working base case of approximately \$219.6M. This is a planning model only. The nearly \$153M GSA capital-maintenance figure must be replaced by independent scope and cost diligence before final underwriting.

Use	Working base
Rehabilitation / physical work reference	\$153.0M
A/E/preservation + PM	\$15.3M
Construction contingency	\$18.4M
Predevelopment / diligence	\$4.6M
Legal / tax / financing	\$4.6M
Permits/testing/commissioning	\$3.1M
Insurance/bonding	\$3.8M
Financing/carry	\$9.2M
Startup/operating reserve	\$6.1M
Digital/audit infrastructure allowance	\$1.5M
Working base	~\$219.6M

5. Potential Capital Sources

Capital lane	Role / current status
Philanthropic grants	Restricted mission capital for public-benefit and eligible rehabilitation/program uses.
Program-related investments	Potential foundation PRI capital subject to tax/counsel design.
Federal Historic Tax Credit	20% of qualified rehabilitation expenditures, generally ratable over five years; actual QRE, structure and net proceeds TBD.
New Markets Tax Credit	Potential 39%-over-seven-years federal credit through a CDE/QEI structure if project and location qualify; allocation and proceeds TBD.
Public capital	Potential grants, appropriations, revenue bonds or other lawful public finance subject to authority and approval.
Tenant/operator capital	Tenant improvements, program capital, equipment and operating contributions.
Project debt/equity	Only through specific non-fee-title project vehicles and subject to federal, lease, tax and securities constraints.

6. Why TitleChain / M5 Is Part of the Deal

The project is not proposing that blockchain replaces the deed, recorder, GSA, NPS or public owner. It is proposing a standardized evidence and authority layer that makes the transaction state visible: who holds title, which jurisdiction controls, which deed/restrictions apply, who has authority, which approvals are complete, what rights are separate from title, and what state transitions have occurred.

Proposed TitleChain / M5 Title-State Process

The project intends to use the TitleChain/M5 protocol as a parallel evidence, provenance and transaction-state layer around the legally authoritative deed and public records. The protocol is based on TitleChain's patented decentralized title-transfer and asset-provenance architecture, including U.S. Patent Nos. 11,720,888 and 12,518,273. The public deed and applicable government recording system remain legally authoritative unless applicable law provides otherwise.

Stage	Proposed M5 / TitleChain treatment
1. Asset identity	Register the physical asset, parcel/legal-description references, jurisdiction and source records.
2. Current title state	Record current titled owner as evidenced by authoritative public/federal records; link deed/title source.
3. Authority state	Register credentialed parties, legal capacity, agency, delegated authority and signature prerequisites.
4. Restriction state	Encode federal historic covenants, reversionary interests, easements, lease constraints and other restrictions as machine-readable policy references.
5. Transfer event	Upon lawful execution and recording, register the state transition and immutable evidence receipt.
6. Public-record reconciliation	Reference official deed/recording instrument, recording date/number, jurisdiction and public-record source.
7. Digital title-state representation	Maintain a non-fractional digital representation of asset/title state and rights metadata; it does not itself grant fee title or override the deed.
8. Ongoing state	Track operating lease, approved rights, financing interests, compliance events and material changes as separate rights layers.

7. Proposed Digital Title-State Representation

Field	Proposed treatment
Asset reference	Physical property + parcel/legal-description + authoritative source links.
Titleholder field	Current legal titleholder as evidenced by official records.
Jurisdiction field	Federal / California / Los Angeles / recording jurisdiction references.
Deed state	Instrument reference, recording status, restrictions and retained interests.
Authority graph	Credentialed entities and named authorized signatories / roles.
Rights layers	Fee title, leasehold, operating rights, financing interests, community/co-op rights kept separate.
Token state	Non-fractional digital title-state representation / provenance object; no claim that the token itself is the deed or conveys title.
Event history	Origination, approvals, transfer/recording, lease, financing and compliance events with evidence receipts.

8. Code + AI + Human Authority

Layer	Function
M5Canon	Deterministic rules, permissions, policy gates and state transitions.
Jev / System One decision intelligence	Narrow classification, routing, scoring and typed probabilistic decisions where appropriate.
LLMs	Complex reasoning, research, drafting and human-readable

	explanation.
Human / institutional authority	GSA, NPS, public owner, counsel, licensed professionals, financial institutions and authorized signatories retain legal authority.
TitleChain	Evidence, provenance and transaction-state receipts across all layers.

Project rule: probability may inform the transaction; probability does not create legal authority.

Programmed Benchmark Objectives

These are target baselines the project is deliberately designing toward. They are not historical results, forecasts, guarantees, or representations of achieved savings. Each project is intended to measure actual performance against the same categories and publish variance from baseline.

Metric	Working baseline	Programmed goal	Measurement	Status
End-to-end transaction timeline	12 months working legacy baseline	2 months target	Elapsed days from defined start gate to defined closing/activation gate	TARGET
Human coordination labor	14,000 hours working baseline	3,000 hours target	Time-tracked legal/admin/project routing hours	TARGET
Administrative labor cost	\$2.10M baseline	\$0.45M target	Actual invoiced and internal labor cost	TARGET
Escrow & title friction	\$1.1475M baseline	\$0.459M target	Escrow/title/settlement/underwriting invoices	TARGET
Compliance/audit friction	\$0.45M baseline	\$0.15M target	Audit, reporting and compliance coordination cost	TARGET
Holding / capital drag	\$8.25M baseline	\$1.375M target	Interest reserve, security, insurance, delay and carry costs	TARGET
Total frictional cost	\$11.9475M baseline	\$2.434M target	Defined cost taxonomy applied consistently across projects	TARGET
Modeled friction reduction	\$9.5135M / 79.6%	Benchmark goal	Measured only after project completion	TARGET
Cost of money	TBD matched conventional financing	Reduce risk premium / fees / carry	Compare spreads, fees, reserves and effective annualized cost	MEASURE
Third-party systems / agents	TBD at baseline mapping	Minimize duplicated state + unnecessary calls	Count systems, integrations, model calls and manual reconciliations	MEASURE

Internal ranking: each PPT project may receive a Commons Performance Benchmark score after measurement. This is an internal operational benchmark, not a credit rating, investment rating or government certification.

9. Cost of Money Benchmark

A specific cost-of-capital reduction is not yet claimed. The project is intentionally designed to test whether earlier title/authority clarity, cleaner diligence, phase-gated capital, shared transaction state and lower coordination risk can reduce lender/investor risk premiums, fees, interest reserves, carry and contingency. The benchmark will compare effective annualized cost, spreads, fees, reserves and timing against matched conventional financing indications and/or comparable transactions.

10. Project-Specific Investment / Capital Lanes

Participant	Proposed economic/legal lane
Foundation / donor	Restricted grant; impact reporting; no deed ownership.

PRI provider	Mission-aligned investment with counsel-defined repayment / below-market economics as applicable.
HTC investor	Tax-credit structure; defined tax/economic rights only; no fractional public-land ownership.
NMTC investor/CDE	QEI/CDE structure if eligible; project loan/investment rights defined in closing documents.
Private lender / operating investor	Defined leasehold/project-company economics, covenants and remedies; subordinate to public/federal title restrictions.
Worker / cooperative participant	Wages + lawful co-op/patronage/operating rights; not fee-title token ownership.
Community participant	Defined governance/participatory rights over legally eligible programs/funds; no deed claim.

11. Principal Risks / Diligence Priorities

Risk	Current mitigation approach
Federal pathway risk	Historic Surplus screening may be unavailable, expired or superseded. Mitigation: immediate written GSA/NPS confirmation and fallback paths.
Public grantee risk	No eligible public grantee has yet committed. Mitigation: City/County/public-instrumentality outreach and preliminary MOU.
Scope / cost risk	\$153M is not a verified rehabilitation budget. Mitigation: independent condition, environmental, engineering and cost diligence.
Occupancy / possession risk	Existing tenant relocation/agreements may affect timing. Mitigation: obtain tenant roster, agreements and relocation plan.
Historic / use constraints	Certain uses may be restricted. Mitigation: NPS-led preservation/use plan and phased program.
Tax-credit risk	QRE, lessee rules, tax-exempt use, recapture and investor structure may differ from assumptions. Mitigation: specialist HTC/NMTC/tax counsel.
Financing risk	Public title/federal restrictions may limit collateral and remedies. Mitigation: finance rehabilitation/leasehold economics, phase-gated commitments and diversified capital stack.
Benchmark risk	Modeled efficiency targets may not be achieved. Mitigation: predefine metrics, independently measure results and publish variance.

12. 90-Day Transaction Roadmap

Window	Priority work
0-30 days	Confirm GSA status/PBC timing; engage NPS; approach public grantee; obtain federal property package; assemble counsel/HTC/NMTC/engineering team.
31-60 days	Title/survey/environmental/condition review; preservation and utilization concept; operator/master-lease structure; preliminary sources/uses; soft-circle capital.
61-90 days	Public-grantee MOU; refined capital plan; draft master lease/development/escrow documents; HTC/NMTC structuring indications; benchmark instrumentation and investor data room.

13. What Is Established vs. Targeted

Status	Meaning
ESTABLISHED / SOURCE-BACKED	Property identity/historic status; GSA disposition research; Historic

	Surplus program framework; public-grantee requirement; potential long-term private/nonprofit lease role.
WORKING ASSUMPTION	Historic Surplus availability for this property today; identity of public grantee/operator; \$200M-\$240M project envelope; actual QRE/NMTC eligibility; final uses and lease terms.
PROGRAMMED BENCHMARK	12 → 2 months, 14,000 → 3,000 coordination hours, \$11.9475M → \$2.434M friction model, lower cost of money, fewer third-party systems/agents.
NOT YET CLAIMED	Completed conveyance; government approval; committed tax credits; guaranteed savings; guaranteed investor return; direct resident dividends from Historic Surplus asset revenue; token-as-deed legal equivalence.

14. Initial Investor / Partner Ask

- Review and comment on the Master Deal Term Sheet and project risk framework.
- Provide a non-binding indication of capital interest or conditional commitment, by capital lane.
- Identify diligence, tax, security, covenant, reporting and governance requirements before definitive commitments.
- Participate in the benchmark design so project-level transaction and cost-of-capital results can be measured credibly.

Selected Source Notes

- Project feasibility source: 312 N. Spring Street Acquisition Feasibility Brief, September 16, 2026.
- GSA: U.S. Courthouse, 312 N. Spring Street, Los Angeles; federal historic-building profile and disposition materials.
- 40 U.S.C. § 550(h): Historic monument conveyances may be made without monetary consideration to eligible state/local public entities, subject to statutory conditions.
- National Park Service, Historic Surplus Property Program: private/not-for-profit organizations cannot directly acquire under the program but may enter long-term leases with public recipients; NPS reviews leases and rehabilitation standards.
- IRS Section 47 / Form 3468 guidance: federal rehabilitation credit equals 20% of qualified rehabilitation expenditures and is generally allowed ratably over five years; long-term lessee rules require tax counsel analysis.
- CDFI Fund, New Markets Tax Credit Program: qualifying investors receive a credit totaling 39% of the qualified equity investment over seven years through certified CDE structures.
- USPTO / patent records: U.S. Patent Nos. 11,720,888 and 12,518,273, Decentralized title transfer and validation of assets.

M5Canon v0.2 Updates

Five Legal / Digital Layers

- Layer 1 — Fee title: authoritative deed and public land records.
- Layer 2 — Federal/public restrictions: NPS, deed, reversion and public-use conditions.
- Layer 3 — Contractual rights: master lease, operating and development agreements.
- Layer 4 — Electronic rights records: optional CERs and digital evidence/control records tied to defined rights.
- Layer 5 — Securities/capital records: only where a security or secured transaction is actually created under definitive documents.

Direct Government-to-Entity Notice Channel

- M5-DPC is proposed as a signed message-to-message channel from an authorized agency identity to a canonical legal-entity endpoint. It is designed to carry registry fees, good-standing changes, compliance notices, filing deadlines, permit/status events and responses with verifiable delivery receipts while preserving statutory service requirements.

M5Canon v0.2 Conformance and Authority Hierarchy

This document is governed by the M5Canon authority hierarchy for PPT-EZ-CA-0001. An authoritative legal act, executed instrument, government record or legally authorized person or institution establishes the legal right or status. A Ricardian contract expresses the authorized right in human-readable and machine-readable form. Deterministic code

TitleChain / M5Canon | U.S. Patent Nos. 11,720,888 & 12,518,273 | Public Commons: TitleChain Foundation / ICSN | github.com/TitleChain-Foundation | titlechainfoundation.org

may validate, constrain, route and enforce only authority already granted. Jev, language models and other probabilistic systems may classify, score, explain and route, but they do not create legal authority. TitleChain records provenance, state, restrictions, authority and receipts. If digital state conflicts with authoritative legal evidence, execution must halt and route to reconciliation and authorized human review.

Clean Document-Control Status

Document control: human-controlled project draft assembled from project source material and reviewed under M5Canon document-control rules. No embedded generative media, comments, tracked changes, hidden prompts, content-control tags or authoring metadata are intended to be present.

v0.3 Economic Architecture

Productive infrastructure + credentialed participation + connected transaction execution

WORKING DRAFT / PROJECT ASSUMPTIONS. This supplement expands DOC-05 for discussion, diligence and counsel review. It does not create an offer, committed financing, approved public use, vendor selection, membership right, tax benefit, government approval or investment return. Definitive rights arise only from applicable law and authorized executed instruments.

One public asset, multiple productive engines

312 Spring Commons is being evaluated as more than rentable square footage. The project is designed to test whether a protected public asset can operate as an integrated productive civic platform in which building rehabilitation, energy, water, food, communications, compute, education, local enterprise and public services reinforce one another.

The multiplier thesis: physical infrastructure supports services; services create earned revenue and public value; energy and technology systems may reduce operating cost and add permitted capacity; education develops skilled participants; food, workspace and business infrastructure support local operators; and legally available cash flow can sustain operations, preservation, reserves and additional productive capacity.

Productive engine	Illustrative economic / public-benefit role
Space + occupancy	Approved leases, licenses, concessions, memberships, workspace and compatible commercial occupancy.
Energy + resilience	On-site generation, storage, efficiency, load management and demand-response or energy-service economics where lawful and technically feasible.
Water resilience	Conservation, HVAC condensate recovery, rainwater capture, treatment/storage and other permitted resilience systems; atmospheric water generation only where performance justifies it.
Food systems	Controlled-environment agriculture, greenhouse/hydroponic production, institutional food contracts, community programs and market activity.
Compute + digital infrastructure	Secure edge/AI compute, rendering, data processing and digital services, with flexible workloads subordinate to critical resilience loads.
Education + workforce	Training, credentialing, apprenticeships, sponsored programs, research and institutional partnerships.
Small business + cooperative services	Shared workspace, repair/refurbishment, maker/production capability, local procurement and enterprise support.
Civic + cultural + events	Events, exhibitions, historic interpretation, convenings and compatible venue activity.

Operating priority: life safety -> water -> refrigeration/food -> communications/security -> essential building services -> community programs -> flexible compute and other interruptible loads.

The project remains subject to structural engineering, historic-preservation review, utility/interconnection requirements, public-owner and NPS approval, permitting, cybersecurity, public-health rules, financing constraints and applicable law.

Technology + Solution Registry

Candidate reference technologies - subject to procurement, diligence and approval

Infrastructure layer	Candidate / reference approach	Proposed TitleChain treatment
Renewable energy + microgrid	Hover Energy or equivalent integrated wind/solar/storage/microgrid architecture	Generation assets, batteries, controllers, warranties, output history, maintenance, restrictions and disposition state.
DC-native loads	ADC Energy or equivalent DC distribution for appropriate native-DC loads	Panels/controllers, service class, commissioning state, maintenance and measured energy performance.
Circular compute	Cato Digital or equivalent second-life enterprise/data-center hardware	Origin, lawful transfer, serial/component IDs, sanitization, refurbishment, benchmark, workload class, energy profile, maintenance and end-of-life.
Water systems	Condensate recovery, rainwater, treatment/storage, AWG if justified - vendor TBD	Source, treatment train, water-quality testing, storage, equipment maintenance and permitted use.
Food systems	Greenhouse / hydroponics / controlled-environment agriculture - vendor TBD	Growing assets, water/energy inputs, crop lots, maintenance, food-safety evidence and output.
Thermal recovery	Compute/HVAC heat recovery and storage - engineering TBD	Source equipment, recovered thermal energy, destination/use, controls and maintenance.
Communications + edge	Secure local communications and public digital services - TBD	Physical assets and service state; security-sensitive topology/configuration remains restricted.

Every selected system becomes a governed asset - not merely a purchase

If selected and deployed, major equipment would receive a persistent TitleChain asset identifier and a versioned asset passport documenting provenance, legal ownership or stewardship, authorized use, maintenance obligations, financing restrictions, measured operating evidence and end-of-life responsibility. TitleChain registration is evidence and coordination infrastructure; it does not independently create ownership, alter a security interest, replace a permit or warranty, or override public-law restrictions.

PV asset passport field	Illustrative record	Compute passport field	Illustrative record
Asset ID	PPT-SS-PV-[unique-id]	Asset ID	PPT-SS-EDGE-000184
Manufacturer / origin	Manufacturer, model, assembly/manufacturing origin and serial	Type	Refurbished / second-life edge-compute server
Installation / system link	Commissioning date; array, inverter and controller association	Components	Chassis, CPU/GPU, RAM, SSD, NIC, PSU identifiers where available
Performance	Metered generation/output history and exception state	Origin / intake	Decommissioned enterprise/data-center equipment; lawful transfer verified
Maintenance / warranty	Inspection, repair, warranty issuer/term and claim state	Data security	Sanitization/wipe or media-destruction certificate referenced
Finance / stewardship	Applicable lease, lien, security interest or asset-lock reference	Refurbishment	Diagnostics, replaced parts, firmware state, burn-in/test result
Circularity	Repairability, take-back and recycling/end-of-life pathway	Workload / dispatch	Approved AI/batch/rendering/edge workload; interruptible where configured
Public vs restricted	Aggregated performance public; sensitive location/configuration and protected documents restricted	Energy / heat	Metered kWh, renewable share, recovered heat where implemented
		End-of-life	Reuse -> component harvest -> certified recycling/disposition

M5 Account First

Verified human -> credentialed role -> commons participation -> permitted project action

M5BOM - Bank of Me is the proposed root account for the verified credentialed human principal. From that human root, a participant may act through the applicable credentialed capacity: **M5BOB** for business/commercial roles, **M5BOI** for institution roles, and **M5BOG** for government/public-authority roles. **M5BOU - Bank of Us** is the proposed collective/member layer for eligible participation in the Public Trust of America commons network.

The account architecture separates the human from the role. A person may represent more than one authorized capacity, but an action for a company, institution or government body must occur through the applicable credentialed role rather than merely through the person's private identity.

Important: M5 credentials do not create a professional license, government authority, investor status, legal membership right or financial entitlement. Where law or policy requires KYC/KYB, investor verification, licensing, agency delegation, procurement qualification, tax status or other determinations, M5 records or references the applicable verified result.

Question	M5 layer
Who are you?	M5BOM - verified human principal
Who are you acting for?	M5BOB / M5BOI / M5BOG
What are you credentialed to do?	M5-CV / role credentials / jurisdiction
Which commons may you participate in?	M5BOU - subject to final Public Trust governing documents
What may you do in this project?	Project policy + authoritative legal instrument + current credential state

Proposed Public Trust of America + first commons

The inaugural M5BOU is proposed as the membership and participation layer for the **Public Trust of America**, beginning with **312 Spring Commons / Spring Commons LA** as its first reference commons. Subject to final governing documents, applicable law and project-specific eligibility, participants may use the same verified identity and credential architecture to determine what services, programs, investment opportunities, work, procurement or governance activities they are eligible to access as additional commons are established.

Portable participation is not portable ownership. M5BOU membership does not itself convey public-land title, a security, a guaranteed return, unrestricted project revenue, or automatic rights in every future commons. Those rights arise only through the relevant deed, trust or membership document, financing instrument, contract, program rule or other authoritative instrument.

AI-native banking + transaction operating layer

After account-level qualification and permissioning, the project proposes an AI-native transaction operating layer that coordinates investors, foundations, lenders, banks, escrow providers, tax-credit participants, public owners, city agencies, permitting authorities, contractors, operators, insurers, auditors and community participants. The objective is not to replace those institutions, but to give authorized actors a common transaction state that can connect to their existing systems of record.

Participant	Illustrative coordinated workflow
Investor	qualification -> diligence -> instrument -> commitment/subscription -> escrow -> milestone draw -> reporting -> repayment/distribution
City / public agency	agency role -> application -> supporting evidence -> fees -> review -> inspection -> permit/status events
Bank / escrow	authorized account/payment role -> receipt -> condition verification -> release -> reconciliation
Contractor / vendor	credential -> procurement -> contract -> insurance -> milestone -> invoice -> approval -> payment
Operator	budget -> operations -> revenue -> obligations -> reserves -> reporting
Auditor / assurance	authorized evidence access -> testing -> findings -> remediation -> verified report

What a Capital Provider Receives

Investment rights arise from the instrument - not from fractional ownership of the public land

A capital provider does **not** receive fractional ownership of the public land merely by investing. The economic asset being financed is the applicable project, leasehold, operating, tax-credit or financing interest established in definitive documents. Exact return, maturity, priority, collateral, distributions, transfer rights and exit terms remain TBD until the applicable capital instrument is selected, underwritten and documented.

Capital lane	Illustrative rights - subject to definitive documents
Private debt	Principal repayment, negotiated interest/fees, covenants, reporting, defined priority and approved collateral/remedies.
Project / operating equity	Negotiated project-company economic distributions, governance, information and consent rights.
Historic Tax Credit	Negotiated tax-credit and project-entity economic rights in the qualified structure.
NMTC	QEI/CDE tax-credit and transaction rights in the qualified structure.
PRI	Negotiated repayment/return, maturity, mission conditions, reporting and remedies.
Grant	Public-benefit deployment and impact reporting; no ownership or investment return unless separately structured.

Illustrative \$25 Million Private Project Capital Tranche

Discussion case only - not an offering or proposed final economic terms. The example below demonstrates how one private-capital tranche could fit inside the broader approximately \$200M-\$240M planning capitalization.

Term	Illustrative discussion framework
Tranche	\$25.0 million
Issuer / borrower	312 Spring Commons project, rehabilitation or operating vehicle - TBD
Instrument	Project debt, preferred equity, project-company interest, revenue-linked instrument or other counsel-approved structure - TBD
Use of proceeds	Approved rehabilitation, building systems, productive infrastructure, activation, equipment, reserves and transaction costs under final sources-and-uses
Funding mechanics	Phase-gated capital calls / regulated escrow / milestone-based draws
Repayment / distribution source	Permitted project-company cash flow from approved leases, food/market, workspace, education/workforce, events/cultural, services and other operations; potentially energy and compute/digital-service economics if separately validated and approved
Priority / return / term	TBD through definitive capital-stack, intercreditor and financing documents; no return presently represented
Collateral	No assumed mortgage or foreclosure right against public fee title; only specifically authorized leasehold, project-company, account, reserve, contract or other collateral
Governance / protections	Negotiated reporting, audit, draw controls, budget/change-order thresholds, major-decision rights, covenants and remedies
Liquidity / exit	Expected restricted and illiquid; maturity, repayment, refinancing, redemption, transfer, call/put or other mechanism - TBD
Land ownership	None. Investment does not create fractional fee-title ownership of 312 N. Spring Street

Illustrative capital execution path: M5BOM -> role account / applicable investor qualification -> eligible capital lane -> diligence -> definitive instrument -> commitment/subscription -> escrow -> condition precedent -> authorized draw -> expenditure / productive asset -> evidence -> reconciliation -> reporting.

Public-Benefit Guardrails + Measurable Outputs

Data + privacy rules

- Store minimum necessary personally identifiable information in public or shared records; keep sensitive data in encrypted, permissioned evidence stores with references or proofs.
- Do not place private communications, device content, identity documents, biometric/health data, passwords, private keys, precise personal location history, network topology or private workloads on an immutable public ledger.
- Separate asset identifiers from the identity of temporary users; apply role-based access so technicians can service equipment without seeing unrelated member or financial data.
- Provide defined processes to inspect, challenge, correct and export participant-linked records where applicable, subject to authoritative legal and operational records.
- Publish aggregate energy, water, food, circularity, compute and uptime metrics while restricting security-sensitive detail.

Transparent operating waterfall

The v0.3 community-benefit allocation does not replace the project's financing waterfall. Project revenue first remains subject to definitive obligations for safety, insurance, regulatory compliance, operating costs, utilities, approved financing, preservation/rehabilitation/maintenance and required reserves. Only **legally available funds** would then be allocated through an approved public-benefit plan.

Priority	Illustrative allocation after required project obligations
1	Essential resilience and community services: energy, communications, food/water access and member support
2	Workforce compensation, training and local procurement
3	Expansion and replacement of productive commons infrastructure
4	Replication in underserved communities
5	Mission-aligned investor distributions/returns only as created by definitive financing documents and consistent with public-title/public-benefit restrictions

Public, auditable project metrics

Category	Examples to measure
Energy	On-site generation, grid import/export, battery state, peak-demand reduction, critical-load coverage, islanded hours
Water	Condensate/rainwater captured, treated/reused volume, quality results, AWG kWh/gallon if used
Food	Output by area, water use, energy use, production cycle and disposition
Compute	Node uptime, kWh, renewable share, interruptible workload hours, useful recovered heat
Circularity	Second-life hardware share, repair/reuse, component harvest and certified disposition
Economic	Utility savings, demand response, compute/food/program revenue, maintenance cost, reserve contribution
Community	Workforce hours, credentials earned, local procurement, service availability and participation

Core positioning

M5BOM establishes the human. M5 role accounts establish capacity and authority. M5BOU connects eligible members to the commons. The AI-native transaction OS coordinates authorized actions. M5Canon governs permission and authority. TitleChain records assets, rights, provenance and evidence. Productive infrastructure generates measurable output.

Spring Commons is the first proposed place these layers operate together. As future commons are established, the architecture is intended to be reusable without implying that one project automatically grants ownership, investment rights or governmental authority in another.

From Public Comment to Public-Trackable Use Case

Implementation demonstration of the TitleChain Foundation SEC recommendations - not an SEC approval or designation

Reference. TitleChain Foundation filed a public comment on September 5, 2026 in SEC File No. S7-2026-30 / Release No. 34-106246. The filing recommends voluntary, implementation-neutral open standards for credential-bound authority, machine-readable restrictions, bounded automation, preservation of underlying title/right provenance, and interoperable evidence that can coexist with the legally authoritative records of regulated entities.

Spring Commons is proposed as a real-world implementation test of that architecture. The pilot is intended to show how a complex federal-to-public asset transition, project capitalization, regulated investment instruments, permitting, procurement, operations and asset lifecycle evidence can be coordinated through one inspectable transaction graph while each government agency, regulated intermediary, fiduciary and professional remains responsible for its own legally authoritative acts and records.

The pilot therefore applies the same separation advocated in the SEC filing: **authority -> execution -> evidence**. A wallet, account, model, token, API key or ledger entry is never treated as authority by itself.

SEC filing recommendation	Spring Commons implementation test
Credential-bound participant identifier	M5BOM human root plus verified entity/role account, current appointment or credential, jurisdiction, scope, status, revocation and evidence before a consequential action.
Known entity -> current human authority -> bounded agent	Government, issuer, investor, contractor, fiduciary and regulated-provider entities are resolved first; the current authorized person is resolved second; any software/AI delegation is narrower and revocable.
Machine-readable restrictive legends / transfer rights	Investment instruments and other restricted rights may carry versioned policy references tied to the legal source, holder eligibility, permitted transfer route, approval and removal authority.
Ricardian three-part representation	Human-readable controlling terms + machine-readable structured meaning + separately bounded executable instructions sharing identifier/version/digest and an explicit conflict rule.
Six-gate automated-agent controls	Identity -> current role/credential -> jurisdiction/legal context -> deterministic policy -> required human/entity approval -> tamper-evident receipt.
Origination authority separated from later transfer authority	Authority to create/register an asset or instrument does not automatically confer authority to transfer, approve, correct, freeze, remove restrictions or cancel.
Underlying right preserved across wrappers / rails	Physical title, leasehold, financing right, security, settlement rail and digital representation remain distinct but linked; later wrappers do not erase underlying title/provenance history.
Regulator-ready evidence	Open documented export can reproduce responsible actor, authority source, instruction, approvals, execution event, authoritative-record update, exceptions/corrections and evidence without requiring the regulator to operate the project stack.

Important boundary: TitleChain Foundation, M5, TitleChain Registry and the Public Trust of America do not become a registered transfer agent, broker-dealer, clearing agency, exchange, custodian or government authority merely because the pilot records or coordinates those roles. Where a regulated function is required, an appropriately registered/authorized participant must be selected and onboarded.

Authority + Responsibility Registry

Every agency, institution, professional and signatory is activated from authoritative evidence - not from title alone

The project should maintain a live **Authority + Responsibility Registry** before execution. The registry records the institution, the exact office/role, the current accountable human, the legal or organizational source of authority, jurisdiction, scope, expiry/revocation state, required approvals, and evidence receipt. A named office is not presumed to be a required signer merely because it is politically or institutionally prominent.

Required field	Purpose
Legal entity / institution	Canonical agency, company, trust, bank, transfer agent, professional firm or other accountable organization.
Authority source	Statute, regulation, deed program, resolution, appointment, license, registration, contract, board action, delegation or other authoritative source.
Office / role	Exact capacity in which the human acts; avoids treating general employment or title as transaction authority.
Accountable human / signer	Current person authorized for the specific action, linked to evidence of appointment/delegation.
Jurisdiction + scope	Federal/state/local or professional scope; asset/project/instrument/function limits.
Credential / good standing	Current license, registration, employment, appointment or qualification evidence where required.
Expiry / revocation	Time limit and live status; stale or revoked authority fails closed.
Approval threshold	Whether action requires one signer, governing body, counsel, transfer agent, regulator, lender or multiple approvals.
M5 context	M5BOM human root plus M5BOB/M5BOI/M5BOG role context as applicable; M5 account does not create the authority.
Agent delegation	Any AI/software agent inherits a narrower, time/purpose/resource-bounded capability and cannot extend its own authority.
System of record	Identifies the legally authoritative government, bank, transfer-agent, corporate, court, permit or professional record.
Evidence receipt	Signed/verifiable record of proposed, approved, rejected, executed, corrected or reversed action.

Candidate public-authority onboarding - role must be confirmed, not presumed

Authority plane	Candidate institutions / roles to resolve
Federal disposition / historic pathway	GSA disposition authority; NPS Historic Surplus program/preservation and lease review; other federal offices only if the final legal pathway requires them.
Public fee-title recipient	Eligible state, county, municipality or similar governmental entity selected for the conveyance path; its governing body and authorized signatory as required by its law/charter/resolutions.
California state context	Secretary of State or other registry for entity/status evidence as applicable; Governor's Office, Attorney General or other state office only where a statute, charitable/public-trust rule, agreement or chosen pathway assigns an actual approval, oversight or signing function.
Los Angeles local context	City or County public owner/grantee if selected; Mayor's Office, City Council/County Board, City Attorney/County Counsel and permitting departments only according to the actual charter, delegation, resolution, permit or project pathway.
Permitting / inspection	Planning, building, fire, utilities, health, environmental, historic-preservation and other reviewing agencies as triggered by the approved scope.

Historic Surplus pathway note: under the current working pathway, fee title should continue to be modeled as a conveyance to a qualifying public entity. The Public Trust of America may be designed as a stewardship, membership, operating, leasing or program framework only to the extent permitted by the final conveyance, lease, governing documents and approvals. The documents should not state that GSA directly conveys fee title to the Public Trust unless a lawful pathway establishing that eligibility is separately confirmed.

Investment + Market Infrastructure Onboarding

The pilot selects regulated participants by function; no provider is assumed in advance

The investment package is the first financial-instrument layer of the demonstration. Each instrument must identify its issuer/borrower, holder rights, governing law, transfer restrictions, official books and records, authorized service providers and the exact point at which an event changes the legally operative state.

Role	Pilot treatment
Issuer / borrower / project vehicle	Definitive entity and authorized signers TBD; instrument terms and governing documents create the rights.
Registered transfer agent - when a security requires/uses one	Selected registered transfer agent remains accountable for the official Master Securityholder File and regulated transfer-agent functions; TitleChain may provide linked provenance/evidence but does not supersede the transfer agent's books.
Broker-dealer / placement / ATS - if used	Onboard only where the chosen offering, distribution or secondary-market pathway requires or uses the role; current registration and transaction-specific authority are verified.
DTC / DTCC participant or settlement/custody provider - if used	Activated only if the selected security/settlement/custody structure uses that infrastructure. Do not assume every project instrument must pass through DTC/DTCC.
Bank / escrow / payments	Authoritative money movement remains in the selected regulated financial/escrow systems; project evidence references deposits, conditions, releases and reconciliation.
CPA / auditor / tax professionals	Credentialed professional role and engagement scope are verified; attestations remain attributable to the professional/firms that issue them.
Trustee / fiduciary / trust agent	Fiduciary role, duties, appointment and scope arise from the governing trust/appointment documents and applicable law; M5 records status/evidence rather than creating fiduciary capacity.
Counsel / specialist advisers	Legal, tax, securities, historic-credit, NMTC, title, environmental and other professional determinations remain with licensed/authorized professionals.
SEC / other regulator	Regulator is not an operator of the project stack. The project should produce regulator-ready evidence exports and preserve official filing/registration/examination records as authoritative.

Investor / instrument activation path

M5BOM human principal -> investing entity / role account -> authoritative identity and entity verification -> authority to sign -> investor eligibility and jurisdiction checks -> selected capital lane -> definitive instrument -> registered/regulated provider checks where applicable -> escrow/funding -> transfer-agent/official-record acceptance where applicable -> TitleChain evidence receipt -> ongoing reporting / corrections / transfer / exit under definitive documents.

M5 credentials may carry verified status or references, but they do not substitute for statutory customer identification, broker-dealer/transfer-agent registration, investor qualification, sanctions review, professional licensing or other legal requirements.

One Transaction, Reconstructable End to End

Physical title transfer and investment-instrument transfer remain separate record domains

The Spring Commons demonstration should let an examiner or authorized reviewer follow the transaction without treating one blockchain event as self-proving. The physical asset conveyance, project lease/operating rights, financing instruments, securityholder records, cash movements and equipment asset passports remain separate authoritative domains linked by shared identifiers, authority references and evidence receipts.

Phase	Required authority / evidence state
A. Federal asset state	Current federal ownership/source record; GSA disposition status; Historic Surplus/NPS pathway evidence; restrictions; authoritative parcel/title references.
B. Public conveyance state	Eligible public grantee; governing-body authority; approved conveyance/deed; federal restrictions; recording evidence; no digital state transition before lawful execution/recording.
C. Stewardship / operating state	Public Trust/commons framework, operator/master lease and delegated operating rights only as actually approved and executed.
D. Capital instrument state	Issuer/borrower; instrument; holder/investor qualification; restrictive policy; transfer-agent and other regulated roles where applicable; official securityholder/loan/equity record.
E. Funds / draw state	Bank/escrow authoritative funds record; conditions precedent; approved draw; vendor/payee authority; invoice/milestone evidence; reconciliation.
F. Productive asset state	Lawfully procured energy/water/food/compute/building system receives TitleChain asset passport tied to ownership/stewardship, warranty, maintenance, financing restrictions and measured outputs.
G. Ongoing compliance state	Permits, good standing, insurance, professional credentials, government notices, financial reporting, transfer restrictions and revocations are updated as current state.
H. Transfer / correction / exit	Authorized transfer, refinancing, redemption, correction, restriction removal, forced action or disposition occurs only under the governing instrument and responsible regulated/public authority.

Regulator-ready evidence bundle

- controlling human-readable legal instrument and version;
- machine-readable rights/restriction/policy representation with source authority;
- identified accountable entity, current authorized human and verified role/credential state;
- jurisdiction, scope, delegation, expiry and revocation evidence;
- instruction, approvals and any bounded agent/service involvement;
- execution event and authoritative system-of-record result;
- TitleChain state/provenance receipt and reconciliation to the authoritative record;
- holds, rejections, exceptions, corrections, reversals and superseding events;
- complete export in documented formats suitable for examination, migration and successor-provider continuity.

This is the central demonstration claim: the public commons can make authority, rights, restrictions, state changes and evidence interoperable without declaring the commons itself to be the government, the transfer agent, the bank, the broker-dealer or the legally authoritative title record.

SEC reference: TitleChain Foundation public comment filed September 5, 2026, SEC File No. S7-2026-30 / Release No. 34-106246. Spring Commons remains a separate project working draft and is not represented as SEC-reviewed, SEC-approved, or a regulatory sandbox.

DOC-05 v0.5 Supplement — Transparent Capital, Jurisdictional Provenance & Public Economic Intelligence

PPT-EZ-CA-0001 / 312 Spring Commons
Working draft • September 19, 2026

This supplement is part of the Investor Executive Brief's public-review architecture. It is not an offering document, investment recommendation, government approval, or representation that any capital provider, data provider, bank, transfer agent, jurisdiction, or government body has agreed to participate.

Capital provenance is part of the deal architecture

Spring Commons is proposed as a test of a simple rule: **material capital should not enter a public-benefit project as an unexplained number**. The project should be able to reconstruct who provided it, the legal vehicle through which it moved, the authority of the people acting for those entities, the instrument governing the capital, the material economic/control rights attached to it, the jurisdictions through which it moved, the authoritative financial records evidencing receipt and use, and the productive asset or milestone ultimately funded.

The v0.5 package therefore adds **DOC-23 — Source of Funds, Entity Provenance, Jurisdiction Chain & Public Transaction Graph Standard**.

Proposed capital path

M5BOM human root → entity/role account → entity resolution → authority/credential status → source-of-funds evidence → jurisdictional capital path → instrument → escrow/bank receipt → approved draw → asset/milestone → TitleChain evidence → ongoing reporting.

A lawful SPV, fund, trust, or holding company may be part of that path, but it is treated as a **node in the graph rather than an opacity wall**.

No undisclosed material economics

The project's public-commons architecture is designed to prevent material economics or control rights from being hidden in parallel agreements. Material side arrangements, affiliate rebates, preferred procurement, exclusive hardware/software commitments, options, warrants, guarantees, priority rights, data/IP rights, referral fees, revenue shares, and other material benefits should be represented in the authoritative transaction graph at the disclosure level required by law and the transaction.

Confidential agreements may still exist where legitimate. Their protected text need not be public, but their **existence, parties, classification, evidence reference, and material impact on project economics, control, procurement, or public-benefit obligations** should not be silently omitted.

Entity intelligence + M5-CV

Spring Commons proposes to evaluate **BrightQuery or equivalent** as one reference entity-resolution/KYB connector. BrightQuery's public materials describe a data graph spanning organizations, legal entities, locations, addresses, and people, derived substantially from official filings and government sources. OpenCorporates has also publicly documented BrightQuery's use of OpenCorporates company data.

These providers are evidence inputs, not sources of legal authority. M5-CV may reference verified entity, role, license, registration, appointment, or good-standing evidence, but the legally authoritative registry, regulator, agency, professional body, executed instrument, or other controlling source remains authoritative.

Jurisdictional Capital Lineage

One transaction can have several legitimate jurisdiction attributes

The project should avoid reducing capital to one simplistic country label. A single funding event may have different jurisdictions for:

- ultimate economic source, where review is required and lawfully determinable;
- fund or trust domicile;
- investing entity domicile;
- beneficial/control relationships, where required;
- remitting account and banking institution;
- settlement currency and rail;
- project destination;
- governing law and regulatory pathway;
- ultimate economic-risk holder.

The proposed **M5 Jurisdictional Capital Provenance Path (M5-JCP-001)** preserves those hops separately.

Illustrative example only:

Singapore provider → Delaware investment vehicle → United Kingdom remitting institution → USD regulated bank rail → California project destination → Spring Commons approved use of proceeds.

The public view can show an intelligible source-to-destination path while sensitive KYC/KYB, bank, beneficial-owner, and source-of-wealth evidence remains restricted to the authorized assurance/regulatory plane.

Jurisdiction Chain / JNR

The ICSN Jurisdiction Naming & Resolution Registry (JNR) provides the canonical resolution layer. Optional names such as `singaporechain.eth`, `japanchain.eth`, `canadachain.eth`, `unitedkingdomchain.eth`, `unitedstateschain.eth`, or state aliases may be used as **technical adapters only if actually registered and mapped**.

A .eth alias is not evidence of government sponsorship, delegated authority, sovereignty, or control of an official government domain. The canonical record must preserve the actual jurisdiction identifier and authority evidence.

This makes it possible to analyze flows across nations, states/provinces, territories, tribal/Indigenous jurisdictions, and local project destinations without confusing technical naming with public authority.

Public / regulator / protected information

Plane	Illustrative information
Public	Participant legal entities, project role, material conflicts, instrument category, public restrictions, capital-origin/destination aggregates, project status, methodology
Regulator / qualified assurance	Full KYC/KYB, beneficial/control evidence when required, source-of-funds/source-of-wealth evidence, bank/escrow records, subscriptions, licenses, confidential side letters
Private protected	Account numbers, tax IDs not lawfully public, identity documents, private keys, protected personal data, privileged material, security-sensitive topology

Transparency therefore means **no undisclosed material rights**, not “put every private record on a blockchain.”

M5Global Capital-Flow Intelligence

Once project transactions are normalized and privacy-protected, the same evidence graph can support a new public economic-intelligence layer.

Working research product: M5 Global Capital Flow Index (M5-GCFI)

Potential indicators include:

- capital committed and funded by source jurisdiction;
- project destinations by country/state/local geography;
- debt/equity/grant/PRI/tax-credit/public-capital mix;
- sector and productive-infrastructure category;
- source-to-destination network paths;
- local versus cross-border capital share;
- transaction time and friction;
- participant/vendor concentration and related-party exposure;
- settlement rail and currency aggregates;
- project pipeline, funding gaps, and opportunity status;
- economic/resilience outputs after activation.

Derived indicators must publish **methodology, source lineage, coverage period, confidence/verification state, revision history, privacy thresholds, conflict controls, limitations, and methodology version.**

Opportunity discovery — not an unregulated exchange

The public commons may maintain an **M5 Opportunity Registry** showing projects in research, diligence, authority-pending, capital-formation, participant-seeking, funded, activation, or operating states.

That can help public and private participants see where lawful opportunities and capital needs exist. It does **not** by itself create an offering or a regulated market.

The broader architecture may use the future concept name **M5 Global Index and Exchange**, but the current index/intelligence layer must not be represented as a registered securities exchange, ATS, broker-dealer, transfer agent, custodian, clearing agency, bank, or other regulated venue. Any future matching, trading, clearing, custody, settlement, or regulated transfer function would require the actual registrations, approvals, exemptions, and authorized operators applicable to that activity.

Why Spring Commons matters

The project can therefore demonstrate an end-to-end economic graph:

public asset authority → verified participants → disclosed capital provenance → investment/financing instrument → regulated banking/transfer infrastructure → productive asset activation → asset-level evidence → operating results → privacy-preserving public economic intelligence.

The goal is not merely to put an old transaction on a blockchain. It is to make **authority, capital, rights, conflicts, jurisdiction, execution, and evidence reconstructable enough that the project can move faster precisely because fewer critical facts are hidden or repeatedly re-created.**

See **DOC-23 / M5-CAPGRAPH-001** for the complete proposed standard and machine-readable schema.

DOC-05 v0.6 Addendum — Open Entity Grounding, Source-Chain Activation & M5Global Intelligence

PPT-EZ-CA-0001 / 312 Spring Commons | Working draft | September 19, 2026

This addendum supplements the Investor Executive Brief. It is not an offering, investment recommendation, government approval, or representation that any provider or jurisdiction has approved or joined the project.

1. Open entity grounding before capital enters the graph

Spring Commons is designed so a material capital provider is not represented only by a wallet, bank wire, fund name, or shell/SPV. The project first resolves the legal entity, accountable human authority, current role/credential state, jurisdiction, and the evidence supporting the relationship.

- BrightQuery or equivalent — government-sourced entity intelligence and corporate-family/KYB reference input.
- OpenCorporates or equivalent — legal-entity and official-registry provenance cross-reference.
- OpenData.org — open entity-reference graph that can support public reproducibility and stable joins across organizations, people and places.
- Overture Maps / GERS — open spatial/place identifiers that can ground where a project, branch, business, or physical asset exists.
- Authoritative source — the actual registry, regulator, bank, transfer agent, licensing body, court, public agency, executed instrument, or other controlling record.

As of September 2026, OpenData.org reports approximately 324 million organizations, 1.2 billion people, 512 million places, and 222 countries and identifies BrightQuery as an initiating member and seed-data provider. These are dated provider-reported coverage figures, not a guarantee that every record is verified for a Spring Commons transaction.

Canonical crosswalk — one entity, many reference IDs

A resolved participant may carry an M5 canonical ID plus the relevant official company number, LEI/CIK or professional registration where applicable, BrightQuery key, OpenCorporates mapping, OpenData.org reference ID, and an Overture GERS ID for its physical place/location. Each identifier carries its own source, snapshot/version, freshness, match method, and correction state. No third-party ID becomes the legal authority root.

2. Source-chain activation — evidence before the jurisdiction path goes live

The jurisdiction chain is activated from verified source-of-funds evidence, not inferred from nationality, currency, an IP address, a bank brand, a wallet, or a .eth name. A capital event moves through explicit states:

**ENTITY_RESOLVED → AUTHORITY_VERIFIED → SOURCE_EVIDENCE_VERIFIED →
JURISDICTION_PATH_RESOLVED → REGULATORY_ROUTING_COMPLETE → SOURCE_CHAIN_ACTIVATED →
INSTRUMENT / ESCROW / SETTLEMENT → DESTINATION_CHAIN_CONFIRMED → USE-OF-PROCEEDS
RECONCILED**

A single event can legitimately touch several jurisdictions. The graph therefore keeps the roles separate: ultimate source where required, provider domicile, fund/SPV domicile, control jurisdiction where required, remittance jurisdiction, settlement jurisdiction, instrument governing law, destination jurisdiction, public-authority jurisdiction, and economic-risk jurisdiction where determinable.

Illustrative only: Singapore provider → Delaware vehicle → United Kingdom remitting institution → California project destination. An alias view may map these to project-controlled names such as singaporechain.eth or unitedkingdomchain.eth, but the canonical JNR/evidence record controls and the alias does not imply government sponsorship or authority.

3. M5Global public economic intelligence

Once the source and destination paths are verified, privacy-protected and normalized, the same graph can support public and private-sector economic intelligence: source-to-destination capital flows, sector demand, project pipeline, capital gaps, public/private/philanthropic mixes, time-to-funding, transaction friction, local versus cross-border participation, and productive-infrastructure categories.

The working M5 Global Capital Flow Index / Opportunity Registry should distinguish OBSERVED facts from ESTIMATED, MODELED, SCENARIO, or FORECAST outputs. Every derived indicator should carry methodology, dataset/snapshot lineage, coverage period, confidence, revision history, privacy thresholds, conflicts, and limitations. Small samples should be aggregated, delayed, banded, or suppressed when publication could identify protected participants or create misleading signals.

“Index and Exchange” boundary

The public layer may organize and display opportunities and verified capital-flow metadata. It is not a securities exchange, ATS, broker-dealer, transfer agent, custodian, clearing agency, bank, or regulated trading venue merely because it uses the working concept name “M5 Global Index and Exchange.” Any future regulated matching, trading, custody, clearing, settlement, or transfer activity must be operated through the legally authorized participants and venues required for that activity.

Investor view

The practical investor question becomes: Who is the participant? What authority do they have? Where did the capital legally originate and travel? What instrument governs it? What restrictions or related-party relationships apply? Where did the money go? What productive asset or milestone did it activate? What authoritative evidence and TitleChain receipts prove the resulting state?
