

M5CANON STATE-TO-ENTITY DUE PROCESS CHANNEL STANDARD

M5-DPC authenticated government/entity notice, status, response and receipt protocol

v0.2 • September 17, 2026 • DOC-22

Human-controlled clean draft • counsel / institutional review as applicable

1. Purpose

M5-DPC defines a direct authenticated message-to-message channel between an authorized government/agency identity and a canonical legal-entity endpoint. It is designed for registry fees, compliance events, good-standing/status changes, deficiencies, cure notices, permit or filing status, administrative determinations and entity responses. It is evidence and workflow infrastructure; legal effect is determined by applicable law and the specific notice class.

2. Channel Topology

Authorized Agency Credential → State/Agency Chain or Resolver → TitleChain Authority/Provenance Check → Legal Entity TCID / Canonical Notice Endpoint → Authorized Human Principal and M5Canon Policy Router → Response / Action → Agency Resolution Receipt.

3. Notice Legal-Effect Classes

Class	Examples	M5Canon Rule
INFORMATIONAL	Guidance, reminder, nonbinding status message	Record delivery; no adverse state without independent authority.
NOTICE	Fee due, filing due, renewal reminder	Track deadline and response; legal consequence only if governing rule provides it.
ACTION_REQUIRED	Deficiency, compliance request, cure request	Create task/deadline; block dependent actions where governing rules require.
STATUS_CHANGE	Good standing → delinquent/suspended/expired	Only authorized agency assertion may change official state.
ADMINISTRATIVE_DETERMINATION	Agency approval/denial/order	Verify issuer authority; preserve appeal/cure rights.
FORMAL_SERVICE	Process/notice intended to have service-of-process effect	Digital channel alone is sufficient only if applicable law/rule/order/contract authorizes it; otherwise use statutory fallback.
JUDICIAL_PROCESS	Court/subpoena/order notice	Treat as high-authority class with exact source and service requirements.

4. Lifecycle States

ISSUED → DELIVERED → ACKNOWLEDGED → ACTIONED → RESOLVED, with optional DISPUTED, CURED, EXPIRED, SUPERSEDED and WITHDRAWN states. Delivery, acknowledgment and legal service are separate facts and must never be conflated.

5. Message Minimum Fields

- notice ID and version
- issuer identity and verified agency credential
- jurisdiction and authority domain
- recipient legal entity / TCID
- notice class and legal-effect class
- governing authority / citation or program basis
- issued timestamp
- delivery timestamp
- response deadline
- required action and allowed response types
- payment/filing reference where applicable
- confidentiality/public-record classification
- authorized fallback service/notice method
- signature/proof and revocation/status checks

6. Due Process Guardrails

1. Verify issuer and authority domain before accepting a legal-effect state change.
2. Give the entity the legally required notice and cure/response period.
3. Preserve the original notice and every amendment/supersession.
4. Provide accessible response and dispute channels; do not make wallet possession the only route if law requires alternatives.
5. Do not auto-pay fees or waive rights without explicit authority/approval.
6. If digital service is not legally sufficient, use M5-DPC as a parallel alert/evidence channel and complete the statutory service method.
7. Record final agency disposition separately from entity acknowledgment.

7. State-to-Entity Examples

Issuer	Event	Resulting State
Secretary of State / registry	Annual filing or registry fee due	FEE_DUE / FILING_DUE
Secretary of State / registry	Good-standing confirmation	GOOD_STANDING
Secretary of State / registry	Suspension/expiration notice	SUSPENDED / EXPIRED only when authoritative status says so
Building/permit agency	Permit approved / correction required	PERMIT_APPROVED / CURE_REQUIRED
NPS / federal program	Preservation review status	PROGRAM_APPROVAL / CONDITIONS / PENDING
Recorder / public record system	Instrument recorded	RECORDED — linked to authoritative instrument reference
Agency / court	Formal process	SERVICE_EVENT with separate legal-sufficiency flag

8. Privacy and Security

- Public ledger/state should store only necessary notice metadata, hashes and non-sensitive status.
- Sensitive attachments remain in authorized private evidence stores with access receipts.
- Compromised/expired endpoints trigger fallback and key-rotation procedures.
- No claim of absolute privacy; threat models and independent security review are required.

9. California Service-of-Process Boundary

California currently provides statutory methods for direct and substituted service of process. M5-DPC should therefore be treated as a parallel authenticated notice/evidence channel for formal service unless and until applicable law, rule, court order or contract expressly recognizes the digital endpoint as sufficient for the relevant service class.
